### Notes:

#### Note 1:
Bars in figures represent either a percentage or a mean score. Percentage questions either represent the percentage of respondents who selected a particular item, the percentage of respondents who selected “yes,” or a “top 2” percentage for scale options. For example, questions on the frequency scale never/quarterly/monthly/bi-weekly/weekly/daily are presented as the sum of the percentage of respondents selecting the top 2 scale options (e.g., % weekly + % daily). Axis labels indicate the scales presented in each figure. For questions about agreement and satisfaction, a mean score is presented. In all cases where the mean score is presented, it is normalized to a 5-point scale. These scale points are labeled on the figure axis.

#### Note 2:
Sample sizes are noted in the legend for each figure. The sample size often contains a range because many figures contain multiple questions, and a different number of respondents answered each question. An “n” range containing zero indicates that the selected group or school did not receive one or more questions presented in that figure.
